

Ventis Server Safe

Certified to LPS1214 Security Category 2.

The Ventis Server Safe is a high security rack for all 19" rack mounted equipment and is an ideal high security alternative to a cabinet. It is insurance approved and is certified by the LPCB to LPS1214 Security Category 2.

The Ventis Server Safe is supplied complete with four rack mounting angles which are adjustable front and rear. It has been designed for most rack mounted equipment to be bolted directly onto the integral framework or on to shelves. The Ventis is available in four standard sizes.

Construction: 3mm thick steel sides and 4mm thick box section, with no visible fixings. Cable entry holes for power and data are located on the top and bottom elevations.

Doors: Ventilated front and rear door sections are manufactured from 5mm x 25mm thick steel grids with approximately 60% free airspace, they include heavy duty hinges and integral dog bolts.

Locking: There are two or three deadlocks on each door operated by Mul-T-Lock® Interactive™ cylinders. They can be keyed alike or individually.

Finish: Polyester powder coated for durability. As standard the Ventis is finished in textured grey and blue (RAL No. 7040 & RAL No. 5007). However other colours can be accommodated to suit individual requirements but may attract a premium. Units are delivered in component form and installed by our team of experts.
